

### **Fukushima Innovation Coast Framework**

# FUKUSHIMA REDBOT TEST FIELD

**Fukushima Robot Test Field** 

#### For Usage • Contact details

Public Interest Incorporated Foundation
Fukushima Innovation Coast Promotion Organization

Location: 83 Shin-akanuma, Kaibama, Haramachi-ward, Minamisoma-city, Fukushima-prefecture, on the premises of Minamisoma reconstruction industrial park, 975-0036 Japan

TEL.+81-244-25-2473

E-mail:robot.info@fipo.or.jp

https://www.fipo.or.jp/robot/

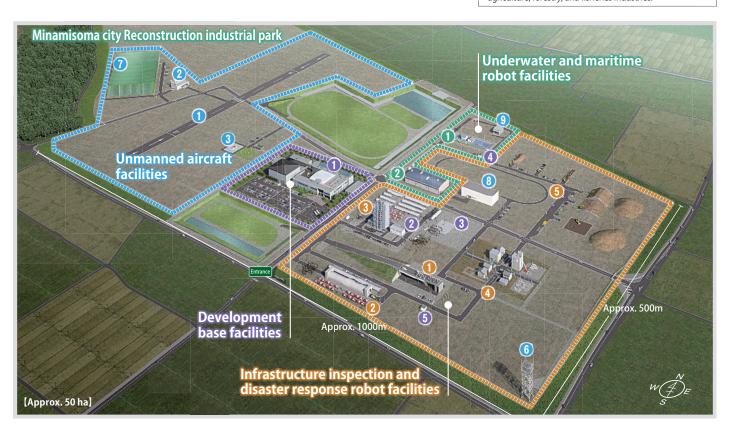

### **Fukushima Robot Test Field**

Fukushima Robot Test Field, developed based on Fukushima Innovation Coast Framework, is one of the largest research and development bases in the world. At this reserach base, verification test, performance evaluation and operation training can be carried out while reproducing the actual operating conditions, mainly for ground, maritime, underwater and aerial robots that are expected to be utilized for logistic, infrastructure inspection and large-scale disaster. The base is scheduled to open in spring 2020, and has unmanned aircraft facilities, infrastructure inspection and disaster response robot facilities, underwater and maritime robot facilities, and development base facilities, within the reconstruction industrial park in Minamisoma City. The size of the site is approx. 1000 m from east to west and approx. 500 m from north to south. The base also has Namie Town runway in Namie Town Tanashio industrial park to enable long distance flight test.

#### **Fukushima Innovation Coast Framework**

The Fukushima Innovation Coast Framework is aiming to restore industries in the coastal region of Fukushima which were lost due to the Great east Japan Earthquake and nuclear disaster. It also incorporates a national project which seeks to build a new industrial base in the region. Under the framework, we are working on industrial clustering, human resource development, and expansion of migrant population dynamics, as well as promoting the implementation of projects relating to nuclear reactor decommissioning, robotics, energy development, agriculture, forestry, and fisheries industries.

## **Unmanned aircraft facilities**

Fukushima Robot Test Field has the largest flight airspace, runway, and airfield with impact absorption net in Japan for unmanned aircraft to provide an environment that enables basic flight test and other various tests such as collision avoidance, forced landing, falling, and long-distance flight, and promotes the practical application of unmanned aircraft.

### Minamisoma runway

### 2 Hangar

### Heliport

These facilities are used for flight tests and operation training for unmanned aerial vehicles. Special flight test such as collision avoidance, forced landing, falling, or object dropping can be conducted in the buffer zone. The hangar has a measurement room that can overlook the entire area and an antenna mount are equipped. Heliport can be used for unmanned and manned VTOL type aircraft.

# [①Runway] Runway ······· 500m×20m (Asphalt pavement)

North-south direction
 Buffer zone
 ...Width: 200m(including runway)

···Width: 200m(including runway)
• Electric Power outlets, LAN
ports near runway

#### 【❷Hangar】 ● Total floor space…

Total floor space···Approx. 558 m²,
Steel construction, and 2 stories

Measurement chamber·····66.5 m² 2F

Antenna installation base·····Roof
 Restroom

### [3Heliport]

• Heliport size···25m×20m (Concrete pavement)

• Apron······25m×23m (Lawn Ground)

Fuel strage
 ......Concrete block construction
 12m×6m×1.2m

### **Unmanned aircraft facilities**

### 4 Namie runway 5 Hangar

In contrast to the Minamisoma runway which runs north-south the Namie runway runs east-west allowing for takeoff directly over the sea.

#### [4Runway]

- ··400m×20m (Asphalt pavement) Runway
- East-west direction
- Buffer zone·····Width 100m (including runway)
- Electric Power outlets, LAN ports near runway

#### [6 Hangar]

Same spec as Minamisoma Hangar

### 6 Communication tower /The wide flight area

Through individual consultation, a flight course over land and sea can be approved for the approx. 13km distance between Minamisoma City and Namie Town. Long distance and wide area flights can also be carried out. Communication towers installed near both bases secure flight safety over a wide area by ensuring communication, measuring low wind direction and speed, and detecting objects such as manned aircraft and birds.

#### [Communication tower]

- Height:30m
- Wide area communication antenna (brought-in is allowed)
- Surveillance radar
- Meteorological Observation System (Measurement range 6km, direction wind speed of altitude 30m, 50m, 100m, wind 150m), wind speed of 5m above ground, temperature and humidity.

#### [Surveillance radar]

- ■High-resolution type radar spec
- Monitoring range.
- Azimuth resolution…Less than 0.45 degrees
- Distance resolution.·····less than 25m
- Target speed resolution capacity ···0.001 m/s or less (Motion path, Traceability)

【Communication antenna】 High-gain antennas and rod antennas for 2.4 GHz and 920 MHz are installed in the Odaka and Haramachi areas.

By switching the antenna, the wide flight area radio communication is covered.

\*As there are only a limited number of compatible radio equipment, settings will be needed

#### Detection size and maximum detection distance by a radar

- An object to be detected······20 cm²: 3.5km \*
  - -----50 cm<sup>2</sup>: 5 km \* ·····500 cm<sup>2</sup>: 10 km \*
- \* The maximum detectable distance is a calculated from a value in free space. This distance varies based on the conditions of the instruments and weather. Update time: 5 seconds.

#### [Meteorological Observation System (Lidar spec)]

- ■Measuring performance
- Altitude measurement ------50 6,000m (Depends on the state of the atmosphere. It can measure up to 14,000 m.)

  Data measuring accuracy···0.5 – 10 seconds
- (Selectable)
- The number of measurement points···-320 points
- Measurement range and accuracy…±30m/s, 0.5m/s
   Distance resolution……25m/50m/75m/100m Scan azimuth angle······0 – 360 degrees (Accuracy 0.1 degree)
- Scan zenith angle···-10 190 degrees (Accuracy 0.1 degree)
- Screen display performance
  Wind direction · Wind speed data
  Horizontal resolution·······200 500m
  Altitude Resolution·······10 50m
- Data output format······CSV format
- Wind direction · Wind speed
  estimation method······VVP method
  Screen update frequency···3 5 minutes
- Display position of Doppler Lidar,
- mapping of past data on a map, zooming in and out of a map

\* Please contact us for the actual range because it is described in the device spec.

### Airfield surrounded by net

This airfield is non-applicable to Civil Aeronautics Act, whose upper and surrounding parts are covered with net. Evaluation tests such as basic flight performance and autonomous control of unmanned aerial vehicles, flight training, and night flight and object dropping can be performed under an outdoor environment involving wind and rain or sunshine, without making any legal application in advance.

- 150m×80m×height 15m
- Long pile artificial grass
- Lighting, electric power outlets, LAN ports
- Net ····· High strength and high weathering polyolefin gap Ø 2.4 × 120 mm

### Wind tunnel

The aerodynamics, flight performance, and stability of the aircraft against gusts and pulsating winds against unmanned aerial vehicles can be tested.

- Floor space……900 m<sup>3</sup>
- Steel construction flat house
- Wind tunnel test device(including table and protective net)
- Overhead traveling crane (4.9 t ) ■ Cross sectional area······3m×3m
- Max wind speed······20m/s
- Wind speed distribution ······less than ± 15% at more than 10m/s (air outlet) Turbulence value  $\cdot\cdot$  less than  $\pm$  10% at more than 10m/s (near the center
- Windstorm performance······Within 3 seconds at 8m/s 20m/s Pulsating performance······Within the cycle of 5 seconds at 10m/s – 20m/s
- Speed stratification performance······Velocity gradient to the vertical
- direction

### Ourability test site

This facility is the test space covered with concrete, for the long-term continuous operation durability test for unmanned aircraft safely.

- Floor space ·······119 m ·
- reinforced-concrete construction flat house Test space·······10m×9.5m×Height 5m Door size······W5m×H4m

## **Underwater and maritime robot facilities**

This is the only test site in Japan for the demonstration test by robot, regarding underwater infrastructure inspection and disaster response. These facilities can reproduce conditions occurring in the water such as dams, rivers, submerged urban areas, or harbors.

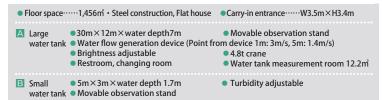

### Submerged urban field

This field can reproduce conditions of submerged city with flood damage. It can be used for information gathering, search/rescue training and etc. by water- surface and underwater robot and unmanned aerial vehicles. It can also be used for testing under conditions where objects and obstacles are sunk, rescue training with manned helicopters or boats

- 50m×19m×water depth 0.7m Outdoor water tank (of which 10m x 10m:water depth 5m)
- Submerged house A ······ 53m The partial 1st floor is submerged
- Submerged house B ······ 53m The whole 1st floor is submerged
- Outdoor plug socket board
   Telegraph pole, Electricwire

#### Indoor water tank

This facility reproduces conditions of dams, rivers, and harbors to perform tests and maneuver training on inspection and investigation with the underwater/ water-surface robot. The large water tank is equipped with a test piece simulated an aging underwater structure, and enables installation of inspection objects, generating water flow, reproducing the dark places. In a small water tank, the performance on observation instruments to be installed can be tested by controlling the turbidity.

## Infrastructure inspection and disaster response robot facilities

This is the only test site in Japan for the demonstration test on infrastructure inspection and disaster response by robot. It is possible to reproduce almost conceivable disaster environment and aging condition in structures such as tunnels, bridges, plants, urban areas and roads. In August 20 to 22, 2020, "World Robot Summit", the international robot competition will be held.

### Mockup bridge

This is a bridge of four different types made of steel and concrete that reproduces aging. It can be used for testing and maneuvering related to status check and inspection. It reproduces the objects to be inspected such as cracking/peeling/flaking on concrete, looseness/cracking on steel bolts, and dysfunction with bearings, and some variations can be replaced as test pieces. Also, objects of hindering on inspection, illumination posts , protective fences that may hinder inspection, trusses, or cable tubes can be installed.

- Length 50m Road width 10m Bridge girder
- height 5m
  Steel bridge part
- Steel simple girder length 35m

  Concrete bridge part
- PC simple pretension system T girder bridge and the same floor slab bridge length15m
- [Appendage]
- Mockup light column, flexible guard fence, rigid guard fence
- Mockup trusses, mockup failure prevention devices, mockup inspection paths, mockup mounting pipes
- Outdoor plug socket board [Inspection object]
- Cracking Peeling flaking of the concrete, loose bolt crack of Steel material, Dysfunction of bearing part

### **Mockup tunnel**

This tunnel reproduces the wall peeling and aging. It can be used for testing and maneuvering on situation confirmation, search, debris removal, aging inspections. On its wall, it is equipped with lighting equipment on expressways and ordinary roads (LED light, sodium lamp) and jet fans to reproduce cracking/peeling to be inspected. Some variations can be replaced as test pieces. Inside the tunnel, obstacles such as vehicle, rubble, rock, or gravel can be placed, and the shutters on both sides can be closed to reproduce the central part of a long tunnel

- Length of 50m (Barbed concrete section 40m,Plain concrete section 10m),road
- Inner section ·· W8.8m×H6.36m
- [Appendage]
- LED light, sodium lamp
- Mockup jet fan
   Mockup fire-hydrant
- Water supply port Induction display board Water drainPlug socket board
- [Inspection object]
  - Cracking of the concrete
  - Flaking Collapse
  - Deficiency of thickness of tunnel wall

### **3** Mockup plant

This facility reproduces plants at normal/disaster situation to perform tests and maneuvering training on inspections, information gathering and equipment operation. This facility has been installed plumbs, valves, ducts, stairs, spiral stairs, catwalks, vertical ladders, tanks and chimneys in various shapes. Abnormal environments can be reproduced, by changing/blinking instruments and indicators, filling smoke or gas, and arranging heat sources and debris.

- Steel construction 6 stories (height 30m) Each floor approx.130 m Elevator for cargo(H2.0m×W4.5m weight upper limit 2.1t)
- 5th and 6th floor 3 chimneys( $\emptyset$  3m,  $\emptyset$  2m,  $\emptyset$  1m) and vertical ladder are installed. The 5th and 6th floor total space 197.08 m
- 3rd and 4th floor Mockup tank (3rd floor r 2.8m, 4th floor r 1.8m) and vertical ladders and spiral stairs are
- 3rd and 4th floor each space127.82 m
- 2nd floor Piping (SGP500A,300A,200A, 100A,50A,PVC200A,50A)Gate Valve, pressure gauge, View station, duct
- 1st floor (2 sections)
  Piping (SGP200A,150A, 100A,80A,50A)
- A Mock up boiler B Pump
  Tank
- Slope, ball valve, gate valve, butterfly valve, pressure gauge, water level gauge

### **Urban field**

In this field, houses, buildings and intersections with traffic light/road sign are arranged to reproduce the condition of city area. Vehicles, debris, and objects to be inspected are placed inside/outside the buildings to perform information gathering, investigation, obstacle removal, search and rescue of personnel, and inspection testing and maneuvering training. It can also be used for running tests using concrete and wood debris, bleaching training on building walls and floors, and automatic driving tests using road parts.

- Building A ······ Reinforced concrete construction, 3 stories, each floor 100m²
- House A ····· Wooden construction, 2 stories, each floor space 53㎡(Simulate the inside house) and simulate damage)
- House B ····· Wooden construction, 2 stories. each floor 53 m (simulates the inside house)
- Garage 1 (building type) ······ Steel construction, 1 story, 110m Inside can be used as a warehouse
- Garage 2 (Housing type) ······ Steel construction, 1 story,56m² inside can be used as a warehouse
- Garage 3 (Housing type) ······ Steel construction, 1 story,56m inside can be used as a warehouse
- Garage 4 ··· Light gauge steel construction, 1 story, 47 m Inside can be used as a warehouse

#### [Road]

- North-south direction
- Length 75m Width 12m (including sidewalks) North-east direction
- Length 96m, width 7.5m (including the sidewalk)
- Telegraph poles, road signs, lights, traffic

#### [Debris]

- Concrete culvert (32 Pieces)
- Bleaching panel (9 pieces)Concrete Debris

### Debris/landslide field

This facility reproduces the road interception site at the time of disaster and the landslide site. It can be used for testing and operation training on unmanned construction heavy equipment and robot status confirmation, search and rescue, and restoration work. It has a soil slope reproducible at 15 or 30 degree, muddy grounds with adjustable softness, and a circuit for running durability test, as well as various obstacles that can be placed on the road.

- Length 400m, width 4m, (asphalt pavement) [Soil slope]
- Inclination 30° ···30m×30m, height approx, 7m Inclination 15° ···30m×30m, height approx. 3m [Cracks/ Sinks]
- Length 20m, width 7.6m, (asphalt pavement)
- Road collapse/Road crack

#### [Muddy ground]

■ 30m×30m depth 0.3m

#### [Debris]

- Length 20m, width 6m, (asphalt pavement)
- Concrete block/ Vehicles

#### [Gravel/ Fallen trees]

- Length 30m, width 6m, (concrete pavement)
- Soil, rock, approx.10 fallen trees

# **Development base facilities**

### Research building

This facility is the main building of Fukushima Robot Test Field, where can use for various tests against wind, rain, waterproof, dustproof, fog, water pressure, temperature, humidity, vibration, and radio wave about performance evaluation of robot. It also can use for preparation, processing and measurement for each test. This facility can be used as a short/long term base for researchers, an office, and hold

a large-scale conference or an exhibition.

In addition, Fukushima Technology Centre Minamisoma Technical Support Centre, installed in the ward, will provide equipment support, technical consultations and development support.

- Floor space : approx. 5,200 m
- Reinforced concrete construction(2stories)
- Parking area for approx. 165 cars
- A Laboratory
  - 30 60 m² 16 rooms
  - office desk 2, office chair 2, Bookshelf 1 (laboratories 1 - 13 are equipped a mini kitchen.)
- Conference room
- 7 rooms for 20 40 people General control room
  - For operation management while looking at the unmanned aircraft facilities
- Indoor examination-place
  - Floor space 32×30m
  - Ceiling height 11 m
  - Overhead travelling crane 2t
  - Epoxy resin type floor covering on floor
  - Carry in entrance W7m×H4.1m
  - Robot driving performance test course (NIST standard)

- Courtyard
  - Courtyard with half roof(36×18m) can use for test preparation
- Conference hall
  - For 180 people (theater type)
- Development laboratory
  - 2 room( For short-term stay, 40 m)
- single phase 100V, single phase 200V
- Instrument Analysis Room/Precision Measurement Room/Dust test room
- Processing room
- **I** Environmental measurement room
- K Anechoic chamber
- Vibration test room
- M Test room for wind resistance rainfall/Waterproof test room
- N Rental warehouse/Depository
  - 30 100m² 7 rooms
  - 2ton overhead travelling crane (only in Depository)
  - Carry in entrance W2, 690 mm/3, 790 mm/ 4, 300 mm x H4, 100 mm
  - Epoxy resin type floor covering on floor concrete
- Management office
- Shower room
- Mini workshop, electronic control room
- Test Preparation Building
- Outdoor test pad
- Measurement shed A Measurement shed B

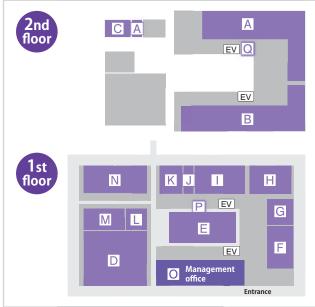

For Preparation of test and maintenance of robot

#### [2] Test Preparation building]

- Steel framed structure 2 stories,approx.220m
- Preparatory office 1 ··· 45.0m
- Preparatory office 2 ··· 74.6m²
- Restroom

- Outdoor test preparation place 20m×25m (Concrete pavement)
- [4 Simple measurement room A 5 Simple measurement room B]
- Light gauge steel construction, Flat house, Floor space 24.3 m
- Office space 16.8 m, restroom, kitchen

#### Period of use

1)

[AM] 9:00 - 13:00 [PM] 13:00 - 17:00 [Nighttime] 17:00 - 21:00 [All day] 0:00 - 24:00 [Extratime] 0:00 - 9:00 and 21:00 - 24:00

- 2) It will be added the same amount as the fee if any of the following applies. ①Holding event with collecting admission fee, tuition, membership fee for the purpose of profit 2 Using for profit-making such as commodity sales, commercial advertising
- 3) In the case of using for preparation, it will be reduced the fee to 70%.
- 4) In the case of continued use of more than 2 days, if it is for storage of exhibits or equipment, Nighttime ~ Morning fee will not be collected.

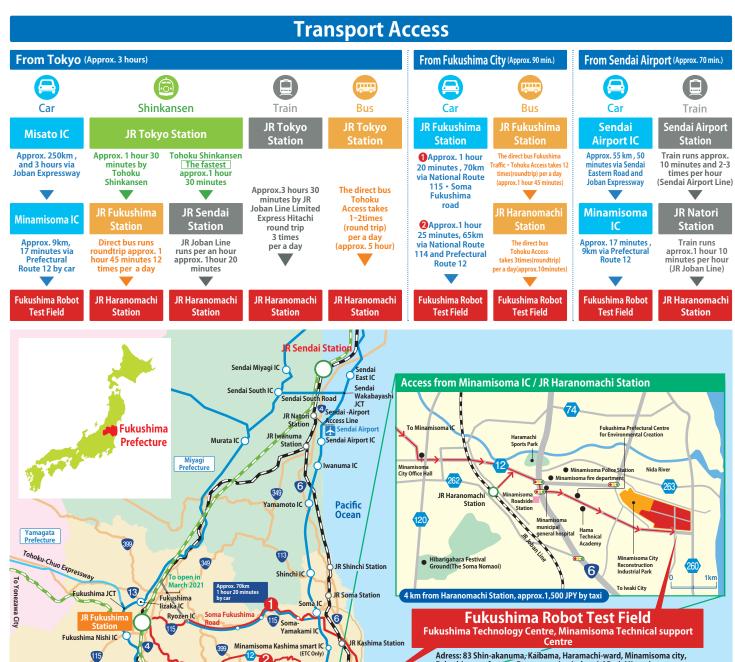

#### Flow of use

- Pre-consultation < by 1 month before the test day>
- ■Please inquire availability for test,by E-mail.
- ■Please contact us as soon as possible if you want to use any facilities.
- Application for use <by 2 weeks before the test day>
- ■In pronciple, please submit required documents by the day 2weeks before the test day.
- Approved for use <by 10 days before the test day>
- If the use is approved after confirming the content, we will send a usage approval and payment form.
- Test plan meeting, payment of fee < by the day before the test day>
- ■The meeting for the test will be held by the day before the test day. ■Please pay the fee before use.

The test day

Please use according to the user guide. ■After use, please restore to original state and be checked by the staff.

#### **Equipment list**

Machining equipment	Fee
Machining center	12,960 JPY per hour
NC milling cutter	2,130 Pyperhou
■ Semi-automatic lathe	1,110 Pyperhou
■ Drilling machine	140 PYperhou
■ Contour machine	180 PYperhou
High-speed cut-off machine	<b>420</b> PY per hou
Shearing machine	1,850 P/perho
Cutting dynamometer	1,510 P/perho
Double-headed grinder	110 JP/perhou
■ Belt grinder	<b>110</b> "PY per ho.
3D printer (1)	<b>920</b> JP/perho.
3D printer (2)	1,780 P/perho
3D printer (1) (FDM type) Molding resin	<b>60</b> JPY per 10
3D printer (2) (FDM type) Molding resin	<b>830</b> JPY per 10

OB printer (2) (FBW type) Wolding resin	000
Analytical equipment	Fee
H Scanning electron microscope	<b>4,460</b> JPY per hour
H Measuring microscope	980 JPY per hour
H Fourier transform infrared spectroscopy system	1,190 JPY per hour
H Energy dispersive X-ray fluorescence analyzer	1,960 JP/perhour
H Stereo microscope	140 .P/perhour
■ FFT analyzer	770 JPY per hour
Oscilloscope	1,040 JP/perhour
Data logger	200 JPY per hour
Radar evaluation equipment	<b>4,140</b> JPY per hour
Q DC stabilized power supply (18V specification)	130 JPY per hour
Q DC stabilized power supply (60V specification)	140 JPY per hour
AC stabilized power supply (single-phase specification)	190 JPY per hour
Digital multimeter	260 JPY per hour
Impedance analyzer	850 JPY per hour
Physical properties equipment	Fee

■ Universal material testing machine 2,320 Mpm to 2,3

H Vickers hardness tester

H Rockwell hardness tester

H CNC 3-D measuring machine	<b>7,680</b> JPY per hour
Measuring machine for Surface coarseness and Outline shape	<b>1,070</b> JPY per hour
ℍ Non-contact 3-D digitizer	<b>2,690</b> JPY per hour
Material processing equipment	Fee
Sputtering device	400 JP/perhour
Sample polishing system	940 PYperhour
Field test system (Handheld microwave analyzer)	<b>3,160</b> P/perhour
Network analyzer	<b>2,000</b> P/perhour
Arbitrary waveform generator	240 Pyperhour
Anechoic chamber	Fee
Anechoic chamber  K Anechoic chamber	
_	Fee **1 9,040 Prefour 7,270 Prefour
K Anechoic chamber	9,040 P/perhour

Dimension · shape measurement equipment

14,450 JPY per hour

X-ray CT scanner

Environment test equipment	Fee
Pressure test equipment	<b>4,490</b> .PY per hour
■ Dust test equipment	<b>3,2</b> 80 .PY per hour
Constant temperature and humidity chamber	380 "PY per hour
Decompression constant temperature and humidity chamber	<b>2,1</b> 80 .PY per hour
Thermal shock test machine	770 JPY per hour
Advanced accelerated life test machine	300 JPY per hour
Drying furnace	140 JPY per hour
2-axis switching vibration test machine	<b>4,450</b> .PYperhour
Single axis vibration test machine	<b>4,310</b> .PY per hour
Constant temperature and humidity chamber (for combined testing)	1,690 JPY per hour
M Waterproof test equipment	<b>2,520</b> .PY per hour
M Rain and spray test equipment	2,780 JPY per hour
M Wind resistance test equipment	240 JPY per hour

Other equipment		Fee	Extratime (per hour)
2 Fume simulatior		100 JPY *2	<b>20</b> JPY
Victim simulatior		400 JPY *3	<b>90</b> JPY
<ul><li>Outdoor large monitor system</li></ul>		<b>7,400</b> JPY *3	<b>1,840</b> JPY
Light projector		400 JPY *2	<b>90</b> JPY
Q Generator		400 JPY *2	<b>90</b> JPY
High-speed camera		4,700 JPY *3	1,170 JPY
Picture record system		5,000 JPY *3	<b>1,230</b> JPY
2 3D motion capture		5,900 JPY *3	<b>1,480</b> JPY
<ul><li>%1 Separate fee for each test equipment is added.</li><li>%3 Fee will occur in A.M. P.M. and Nighttime.</li></ul>	※2 Fuel cost (or smoke)	e agent cost) is not incl	uded.

Remarks (1) A.M.: 9:00 a.m. to 1:00 p.m., P.M.: 1:00 p.m. to 5:00 p.m., Nighttime: 5:00 p.m. to 9:00 p.m., All day: 12:00 a.m. to 12:00 a.m., Extratime: 1 hour during 12:00 a.m. to 9:00 a.m. and 9:00 p.m. to 12:00 a.m.

530 JP/perhour

420 JP/perhour

<sup>(2)</sup>  $\underline{\text{The same amount as fee is added}}$  when it falls under any of the following.

<sup>1.</sup> When holding an event by collecting admission fee, attendance fee, or membership fee for a profit. 2. When using for any profit-making activities, such as selling goods, commercial advertisement, etc.

<sup>(3)</sup> Fee is reduced to 70%, when using for preparation.

<sup>(4)</sup> When using continuously for two days or more, fee is not occured from the night to early morning, as far as it is used for storage of display items and equipment.
